
WEBSITE PORTFOLIO

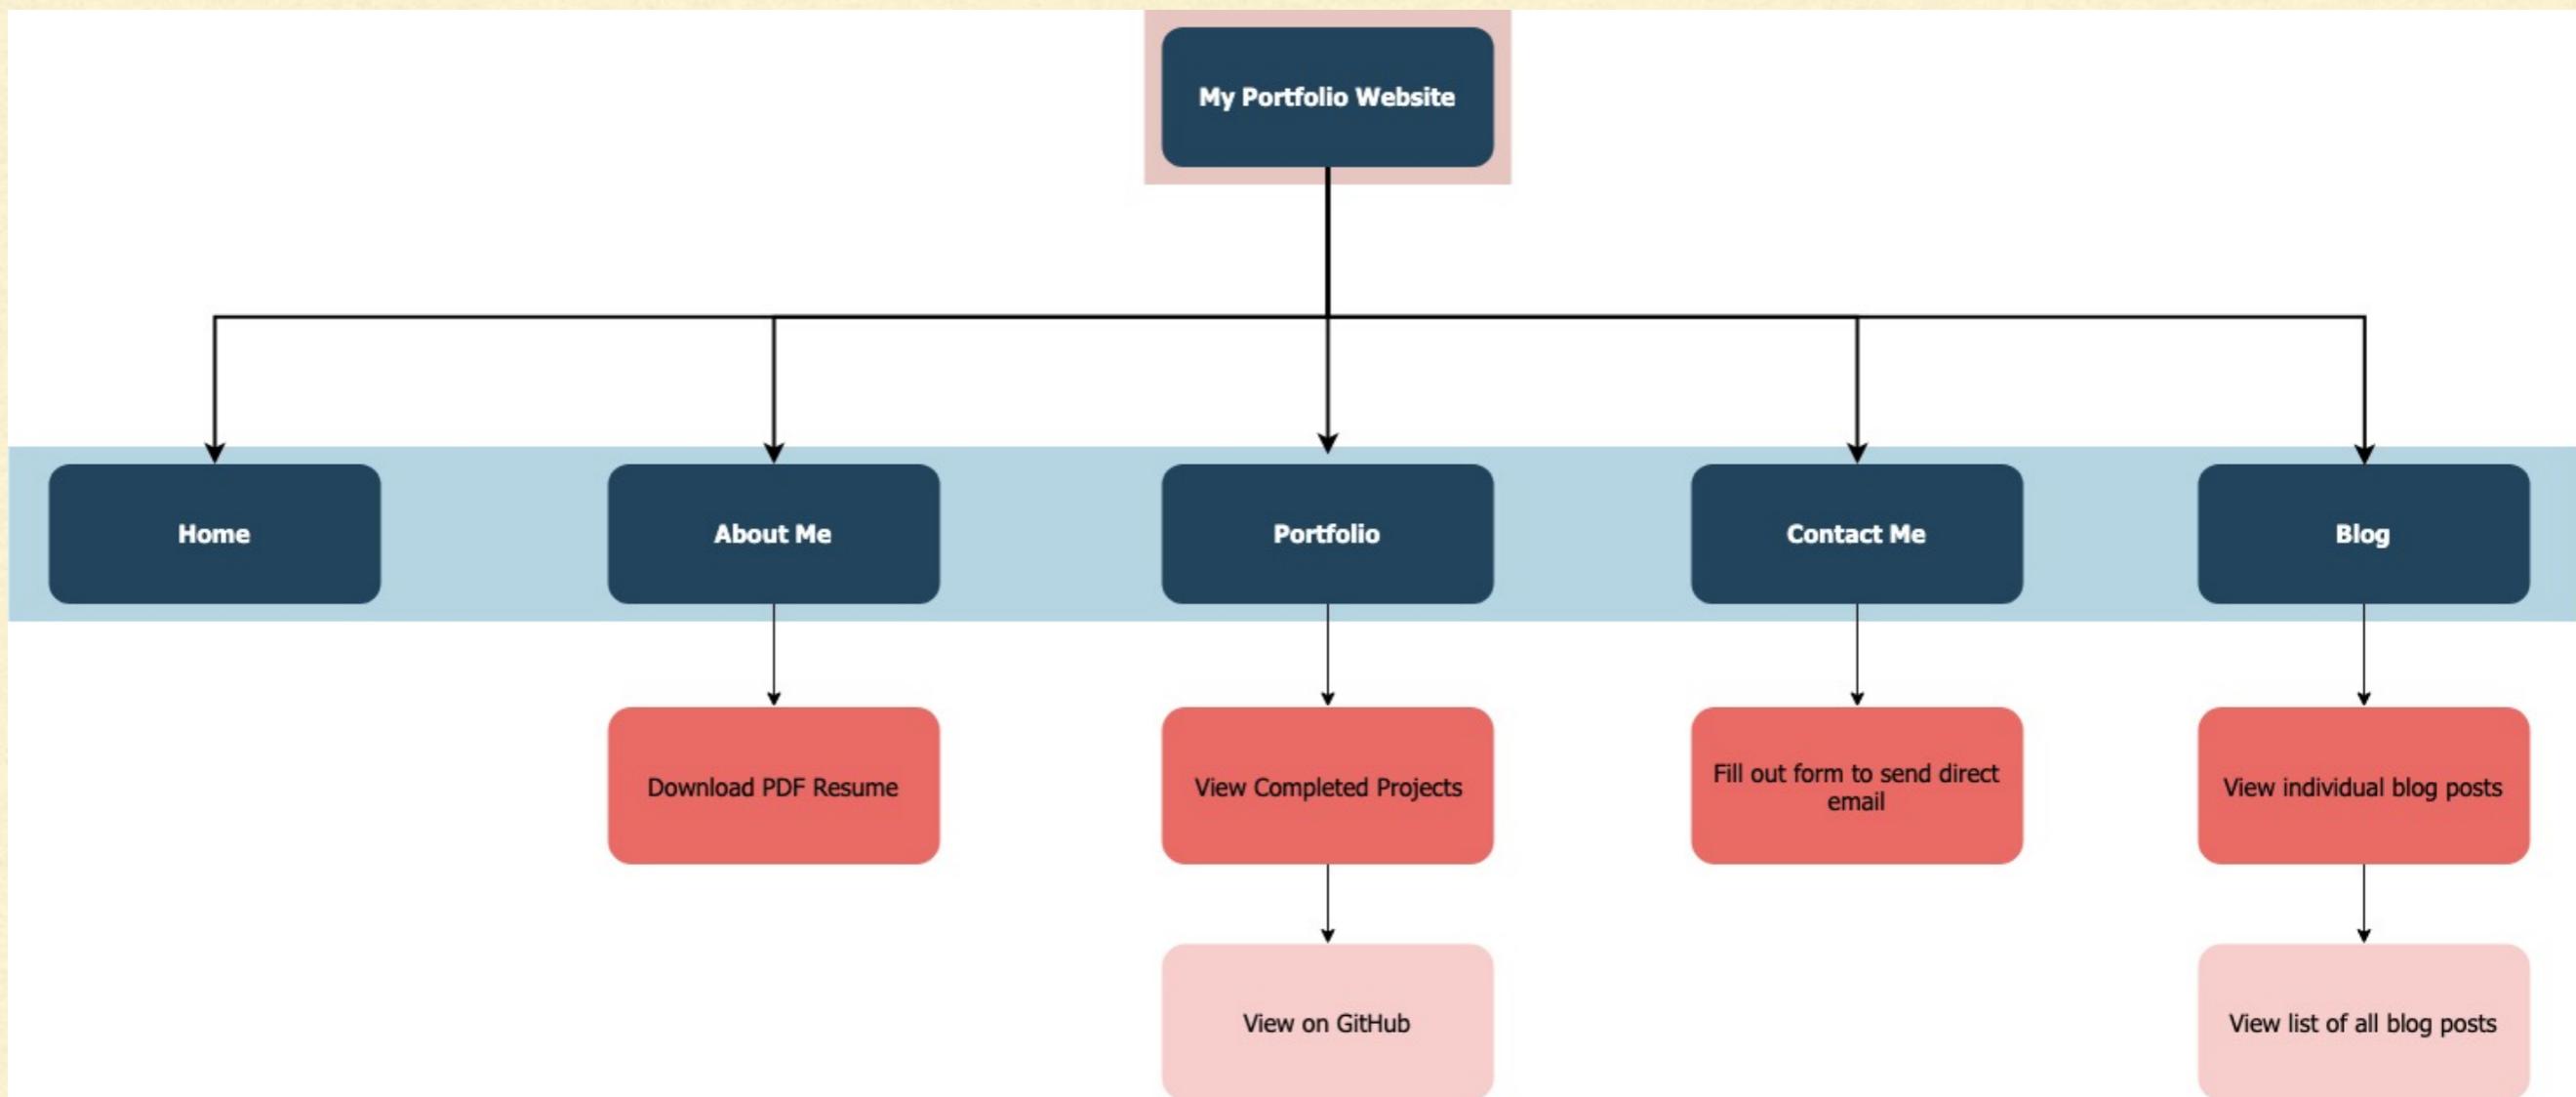

Melissa Bykersma

FEATURES

- Landing Page
 - About Me Page
 - Blog Page with sample posts
 - Contact Me Page
 - Portfolio Page with current projects
 - Links to Social Media
-

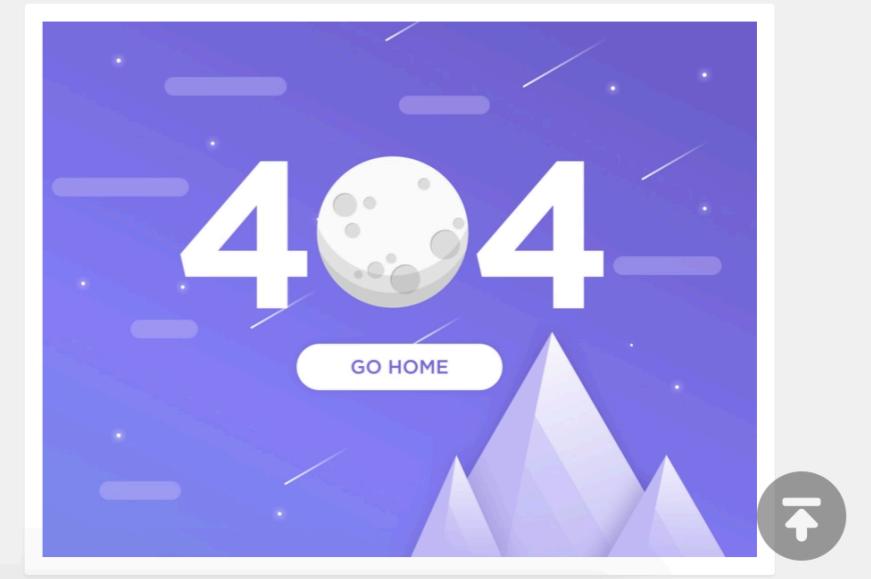

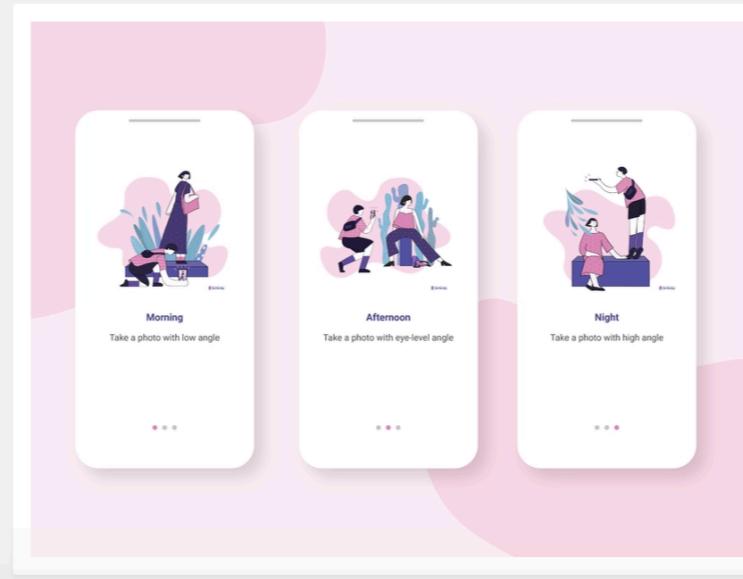

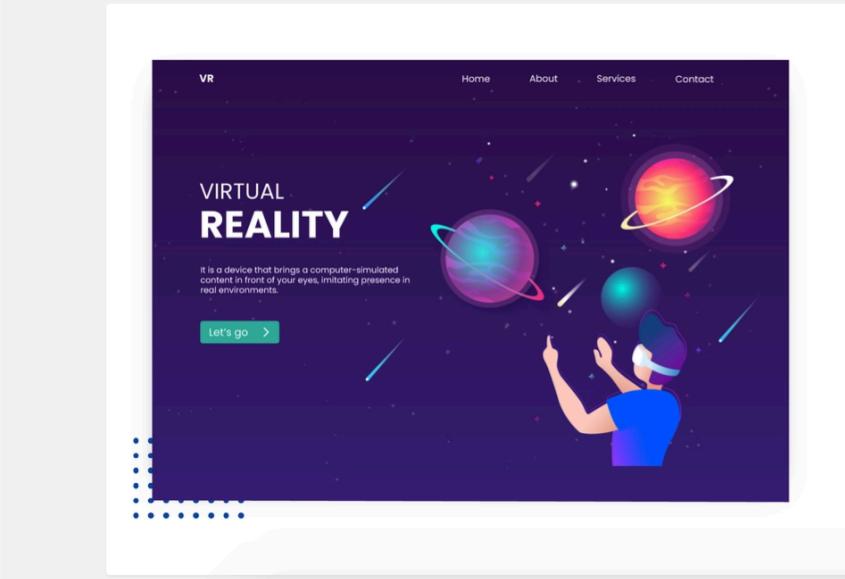

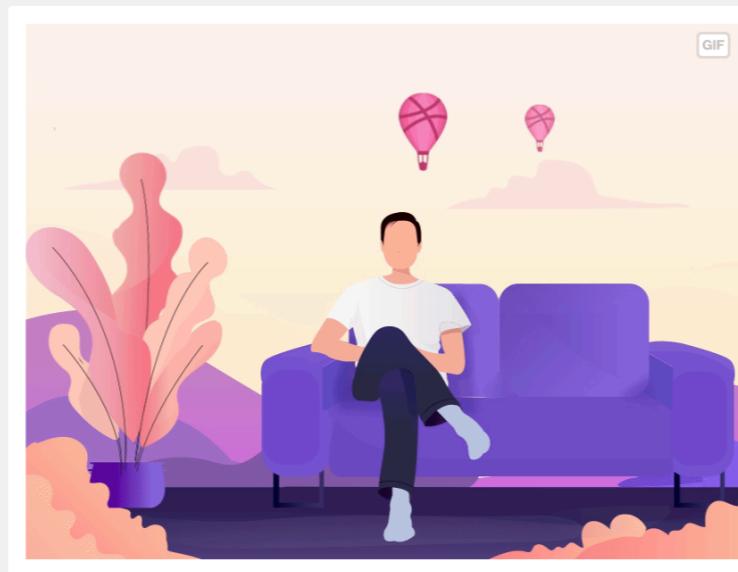

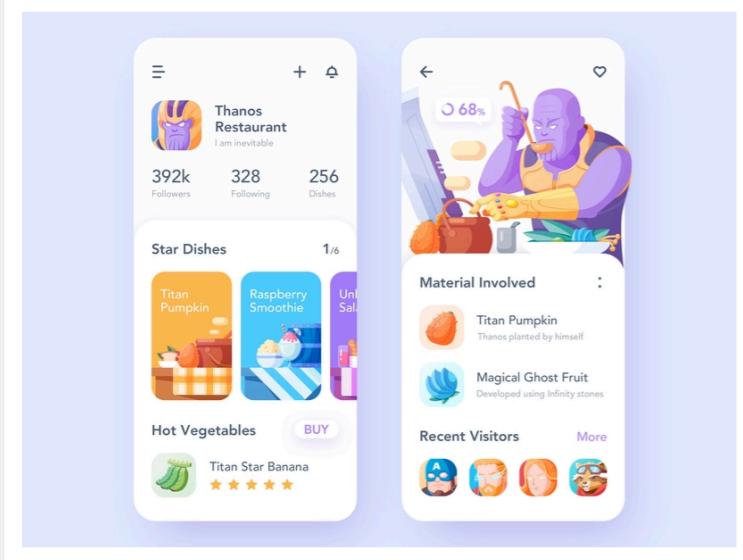

COMPONENTS

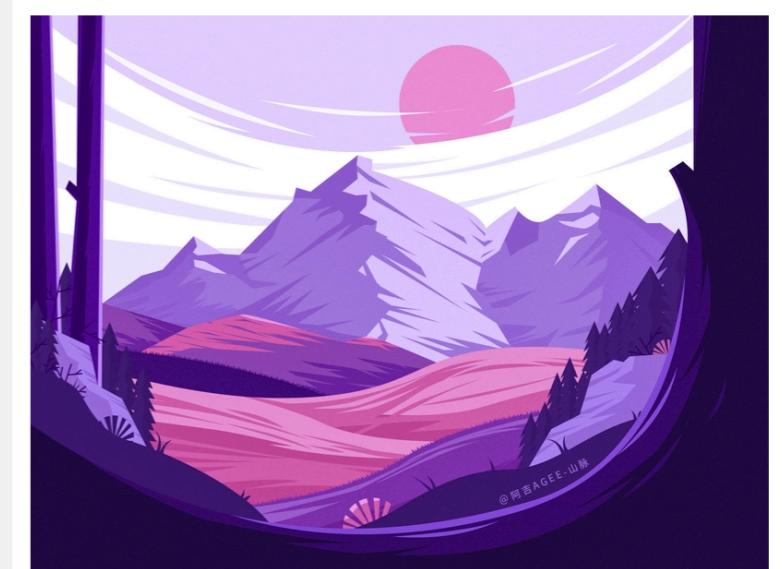

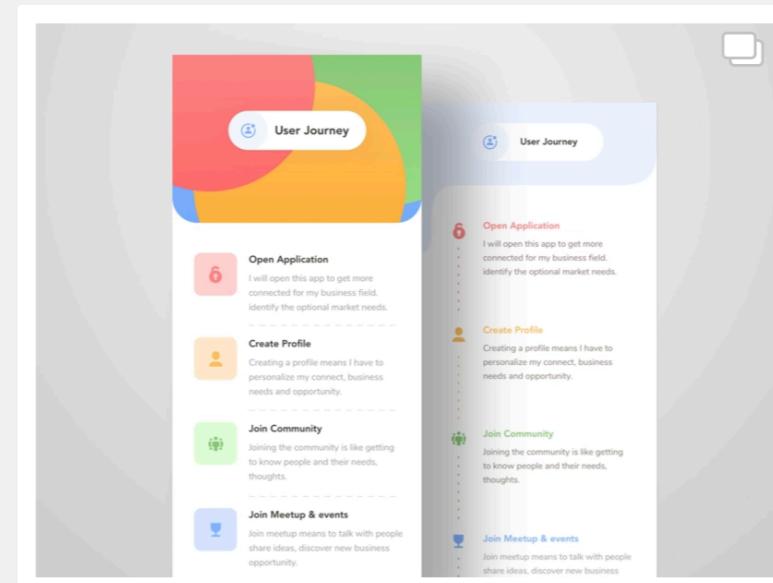

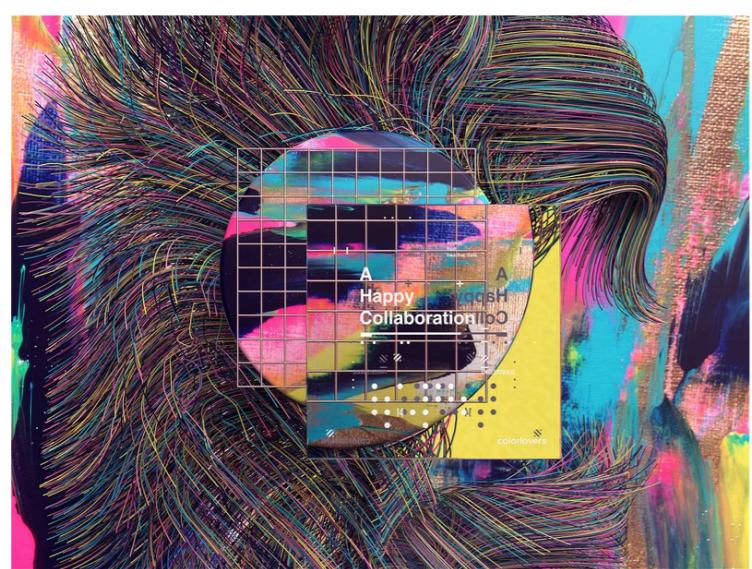

- Website is navigated through the navigation bar at the top (a drop down for smaller size screens). Every page is accessible from one another.
 - Footer at the bottom contains links to professional accounts.
 - Consistent structure throughout - nav bar, main content, footer. Some pages have scroll to allow for more content with the footer and nav bar still remaining on screen.
-

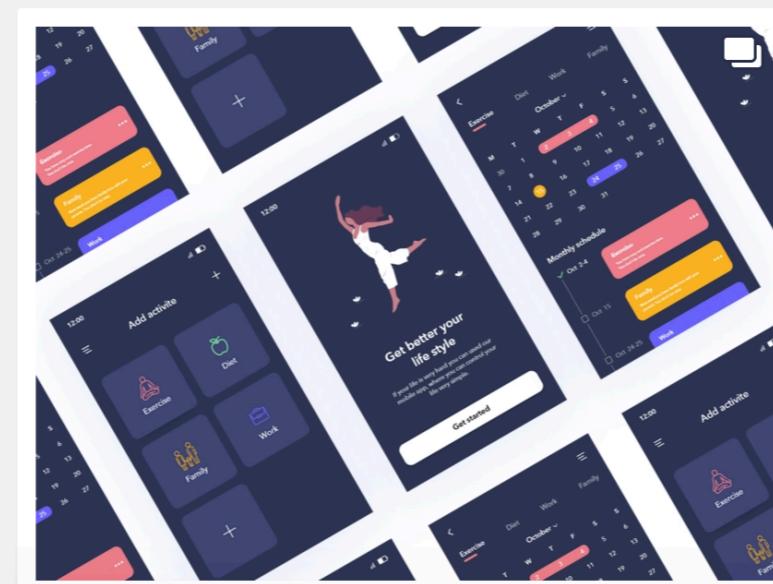

DESIGN PROCESS

- As you can see in the next slide I initially started this project, with a clear vision of the colours I wanted to use. I created a Dribbble bucket that was very distinct. I played around with the colour schemes I had chosen and found that with my design experience it was very hard to layer these colours on top of each other.
 - I ended up changing my theme to a much more simple design that was a lot easier to work with.
-

Two screenshots of a website for "BUSWORD". The left screenshot shows a landing page with sections for services, team members, and a blog. The right screenshot shows a portfolio page with a grid of projects.

Three screenshots of a mobile application titled "Solar System". The first screen shows a main menu with options like "Saturn" and "To infinity and beyond". The second screen shows a detailed view of the Sun. The third screen shows a selection of planets.

melissa.bykersma

Hi, my name is Melissa Bykersma.

Junior Software Developer in training.

DEVELOPMENT PROCESS CHALLENGES

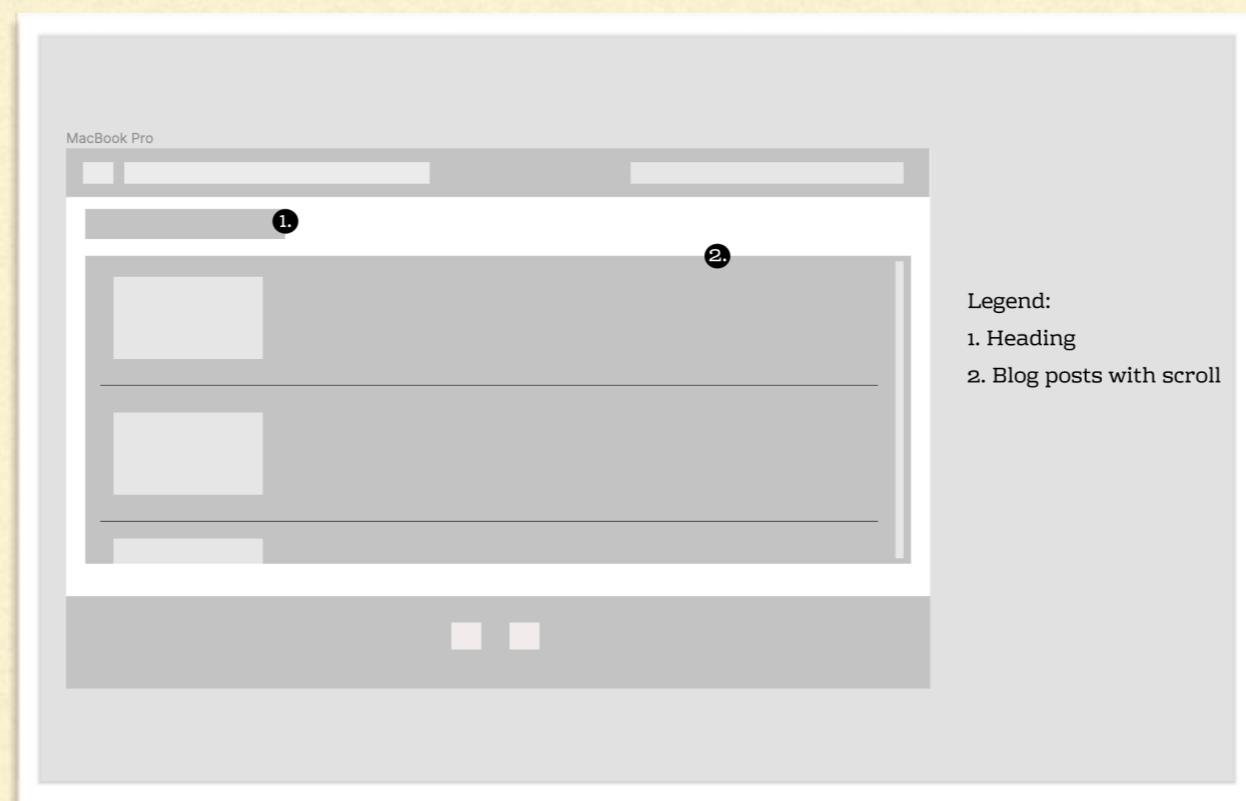

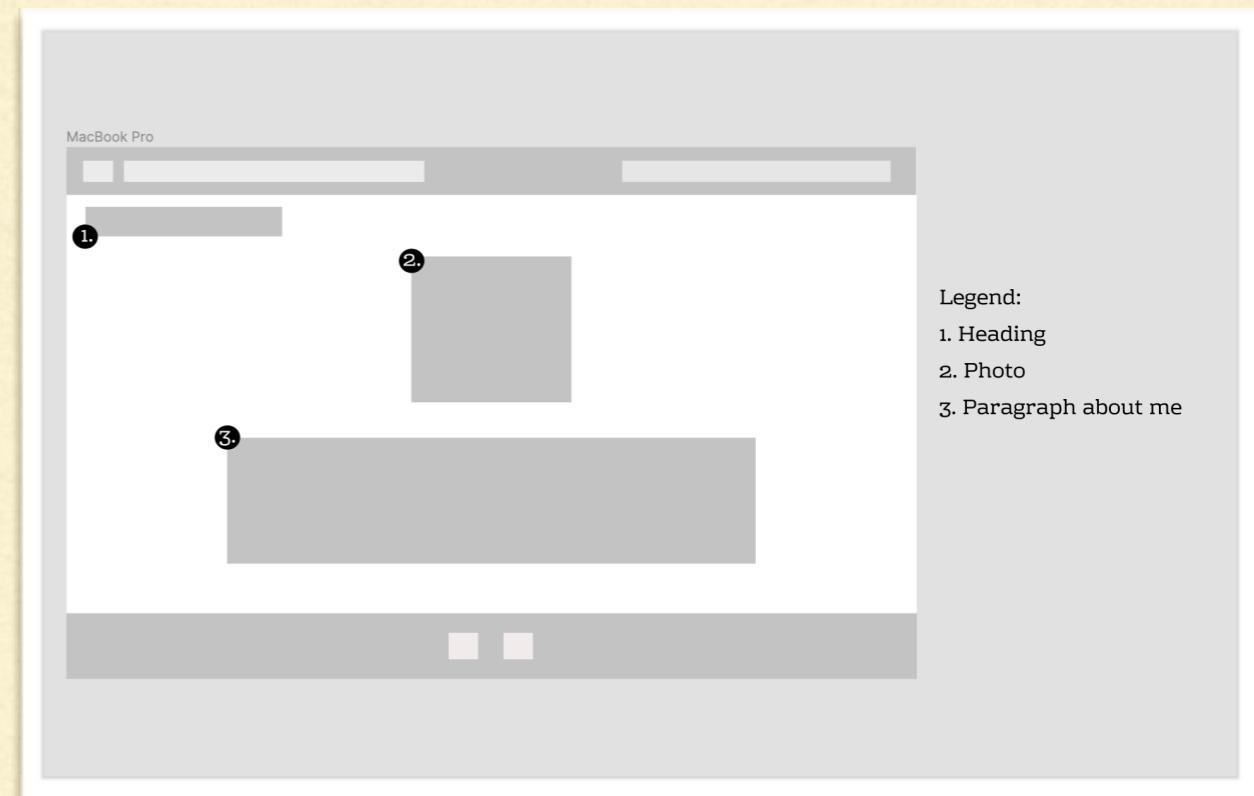

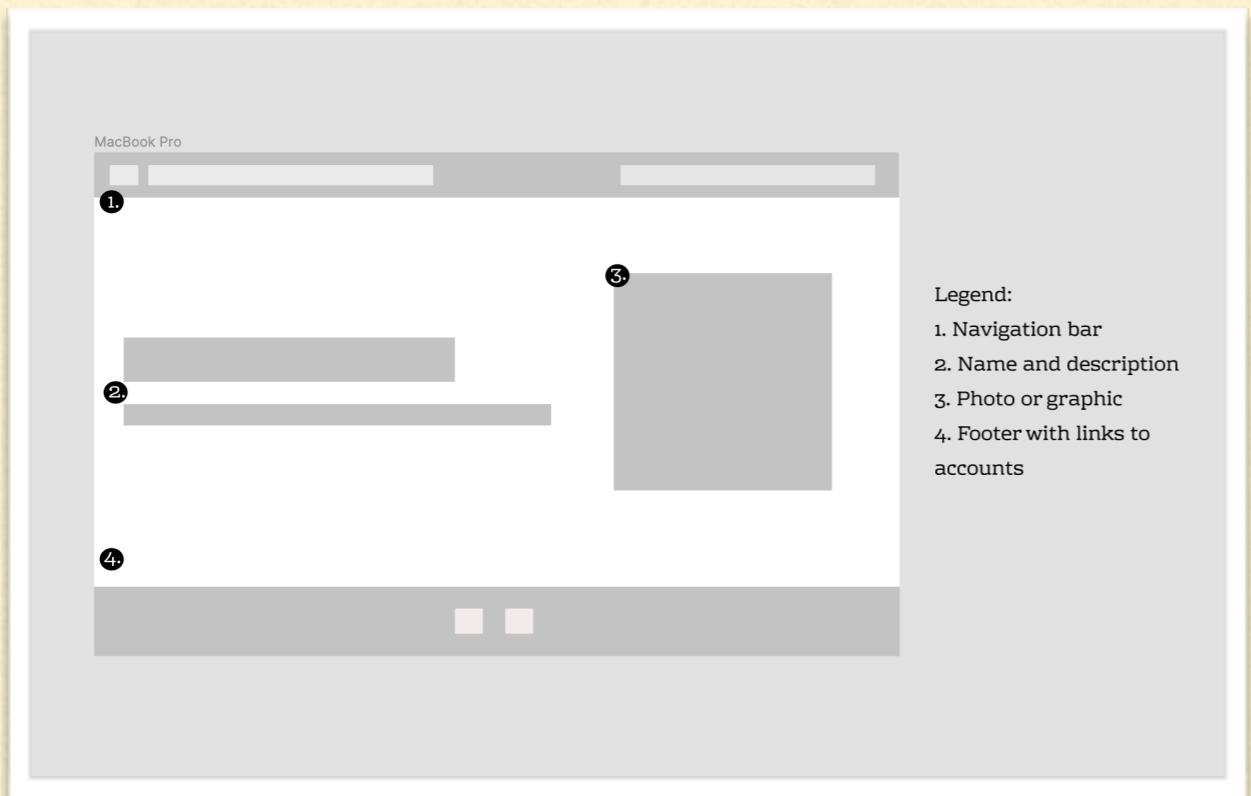

- Designing with colours - not very creative minded
 - Working with flexbox - the amount I used has definitely improved my skills
 - Media Queries - creating them at different pixels. Sometimes it's not as easy as 'desktop', 'tablet' & 'mobile'.
-

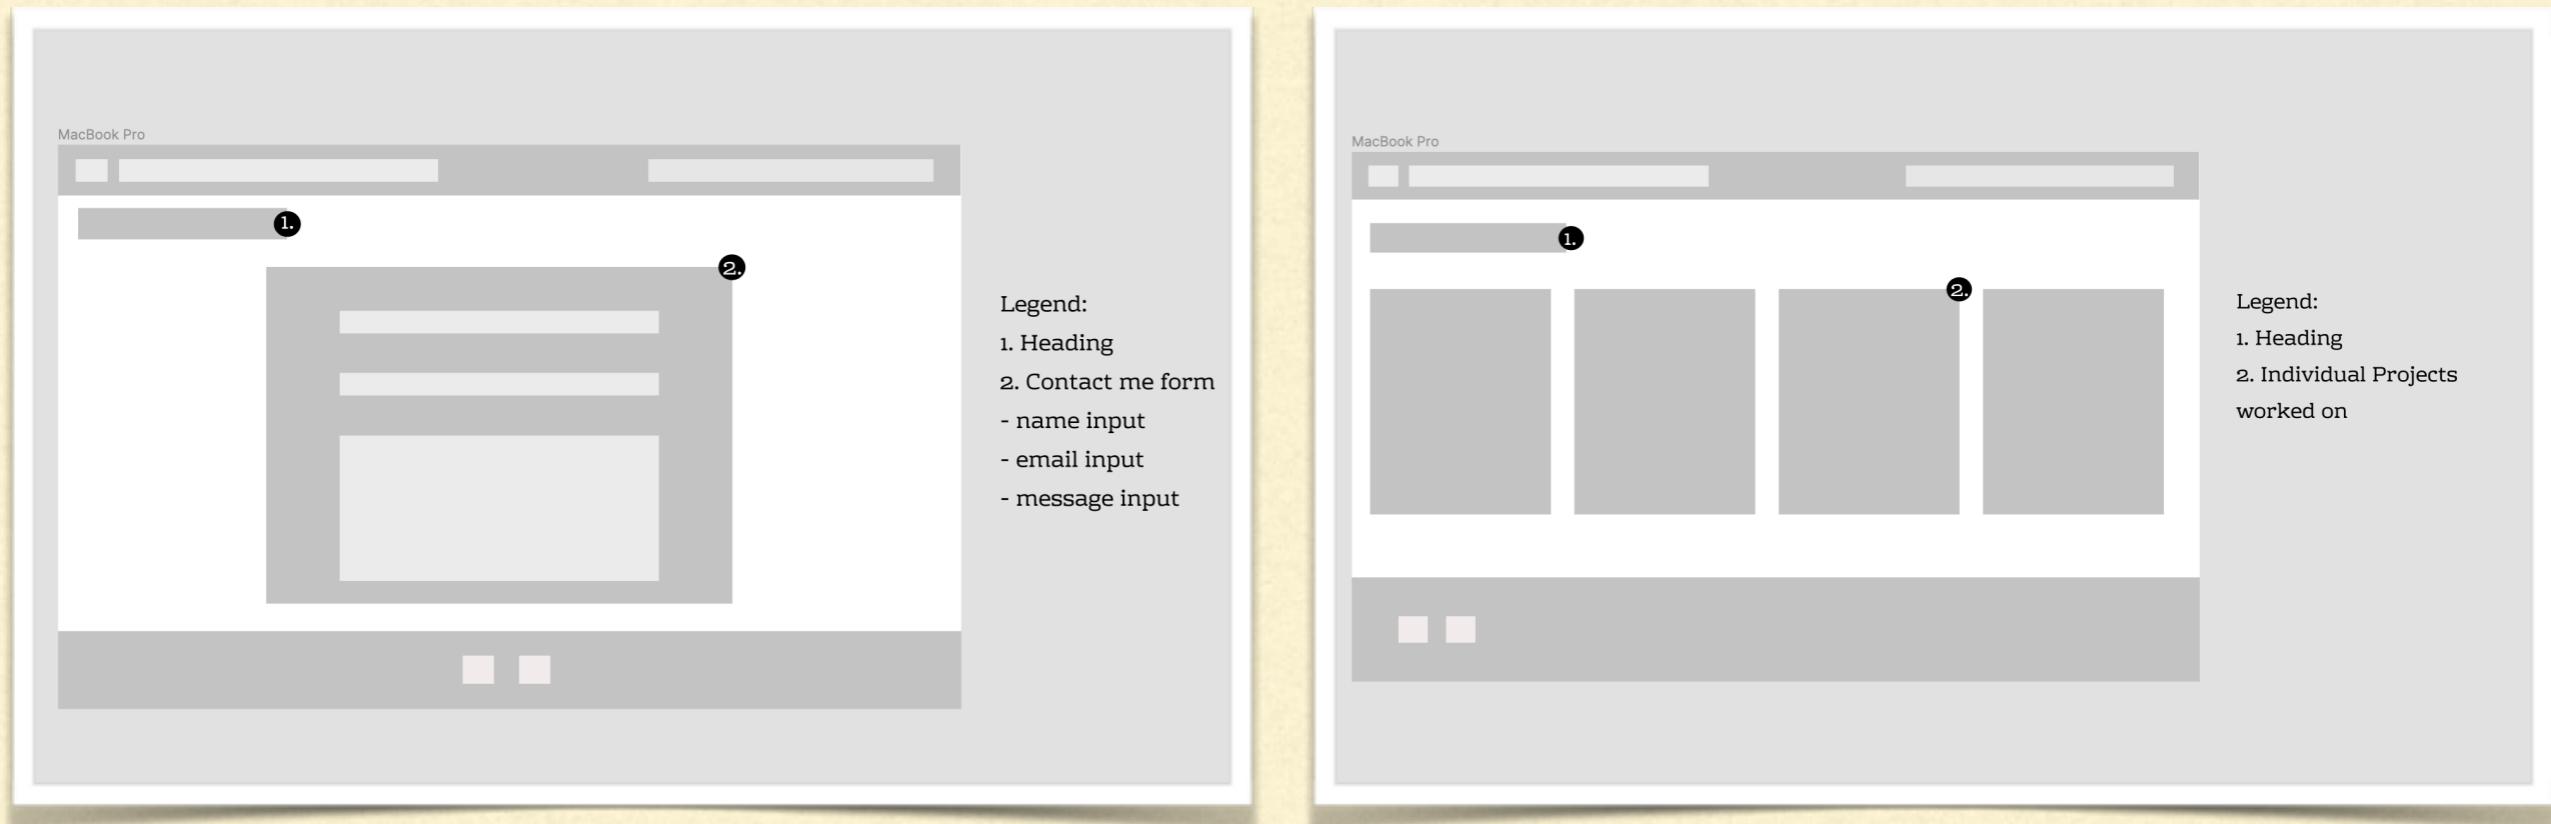

DEVELOPMENT PROCESS

FAVOURITE PARTS

- In the end, working with flexbox became one of my favourite parts. So many variations and different ways of doing what you want it to do.
- Working with the HTML in general. Learning all the layering that needs to happen to make a website work.

WIREFRAMES

- Originally went with the heading at top and then content below. Changed halfway through to have them side by side and creating media queries when getting to a certain size.
